

Door & Window Seals

The heat loss from an unsealed home through gaps around doors and windows is around 12%.

These gaps can also allow the intrusion of Sound, Rain, Energy, Draughts, Dust, Light, Insects and Vermin.

The solution is to fit a Raven Sealing System that seals these gaps. Raven seals are frequently multipurpose, sealing against a combination of intrusions and leakages. Easily fitted they can provide a complete and continuous seal for all door & window types whilst not impeding their normal use.

While the problem is big the cost of the solution is small. In fact the energy saving benefit derived by fitting Raven door and window seals is a fraction of the cost as compared with double glazing or roof and wall insulation.
