About Us

Relax, we're with you all the way

At Kleenit Group, we provide a complete residential, commercial and industrial cleaning service to a broad range of clients throughout Australia.

From floors to roofs and graffiti to cars, we get the cleaning job done. Quickly. Efficiently. No excuses. What's more, we also provide a range of sealing and protection services.

We are Australia's cleaning, sealing and surface protection specialists – a specialised nationwide network of local experts armed with the best equipment, support systems and environmentally friendly cleaning products.

About Us

Our mission and values

It's our mission to be the first point of contact for anyone who requires building cleaning services – homeowners, businesses, local councils, national government agencies, any client anywhere in Australia.

- **Professionalism.** We use the best tools and environmentally friendly products.
- **Integrity.** We deliver what we promise – on time, on budget, every time.
- **Pride.** Every job is a matter of personal pride for our operators.

Some businesses pay lip service to their values. Ours underpin and guide everything we do, from recruiting operators to delivering our cleaning services. Everyone at Kleenit shares the same quality-focused ethos – something you can see in every job and our group's continuing success.

'...a fleet of fully equipped vehicles that effectively operate as mobile cleaning centres'

- Anti slip floors
- Fire/smoke damage cleaning
- Epoxy floors
- Line marking
- Roof & gutter cleaning

High Pressure Cleaning

High pressure cleaning is one of the the most effective and environmentally friendly ways to clean your home or commercial environment.

Not only is Kleenit high pressure cleaning an excellent way of removing dirt and stubborn stains, but it also removes bacteria and fungus that may lurk in your patio paving, driveway or commercial premises. Something to think about!

High Pressure Cleaning

Why does the Kleenit high pressure cleaning process give the best results? Kleenit ONLY use HOT water in our high pressure water cleaning process!

Would you clean the dishes with cold water? Absolutely not! The same principle applies to our high pressure washing! Water is heated on the back of the Kleenit vehicles by a purpose made instantaneous heater, and is the ONLY way to optimise cleaning results, particularly when oil stain removal and grease spots are involved.

Kleenit uses dedicated high pressure cleaning machinery.

We DO NOT simply blast your paving or concrete and cause splatter all over your windows! Kleenit use the latest brick paver cleaning and concrete cleaning machine, which transfers the hot water down into your paving or concrete via a spinning water delivery device, located beneath the machine. This creates very little splash up and ensures the hot water and high pressure cleaning is concentrated where its supposed to be... on your brick pavers or concrete.

Every Kleenit operator is highly trained

Every Kleenit operator is highly trained and has a vast amount of experience in our high pressure cleaning and paver sealing techniques, and understands exactly what needs to be done in each scenario to ensure your total satisfaction every time. Each Kleenit operator has the skills and technical knowledge to offer expert advice on paver sealing and concrete sealing should the need arise.
